

TORRPEDDO PROJECT BOOK

Executive Summary

Torrpeddo is an industrial-grade, premium torrent client designed for the modern desktop. Built primarily with Python and the Electron framework, Torrpeddo leverages the powerful `libtorrent` suite to offer a seamless, high-performance experience that bridges the gap

between complex network protocols and professional user interfaces.

Architectural Deep Dive

Torpedo follows a decoupled architectural pattern, separating the presentation layer from the core logic and network engine. This is achieved through three primary layers:

1. Frontend: Electron Framework

****What is Electron?**

****Benefits for Torpedo:****

- **Visual design tools**

to create a native UI

2. The Bridge: IPC (Inter-Process Communication)

****What is IPC?**

****Implementation: Secure JSON-RPC****

Communication layer

****Why this approach?****

- **Decoupling**: Touching the

3. Backend Engine: Python & libtorrent

The Core

Multi-threaded Performance:

- **Engine**: I/O, network torrent frag

Development Process & Methodology

The Torpedo project followed a "Platform-First" methodology:

1. **Language**: integration
